# The Problem

Multiple Carriers

Need to Select

But do not know which one to select

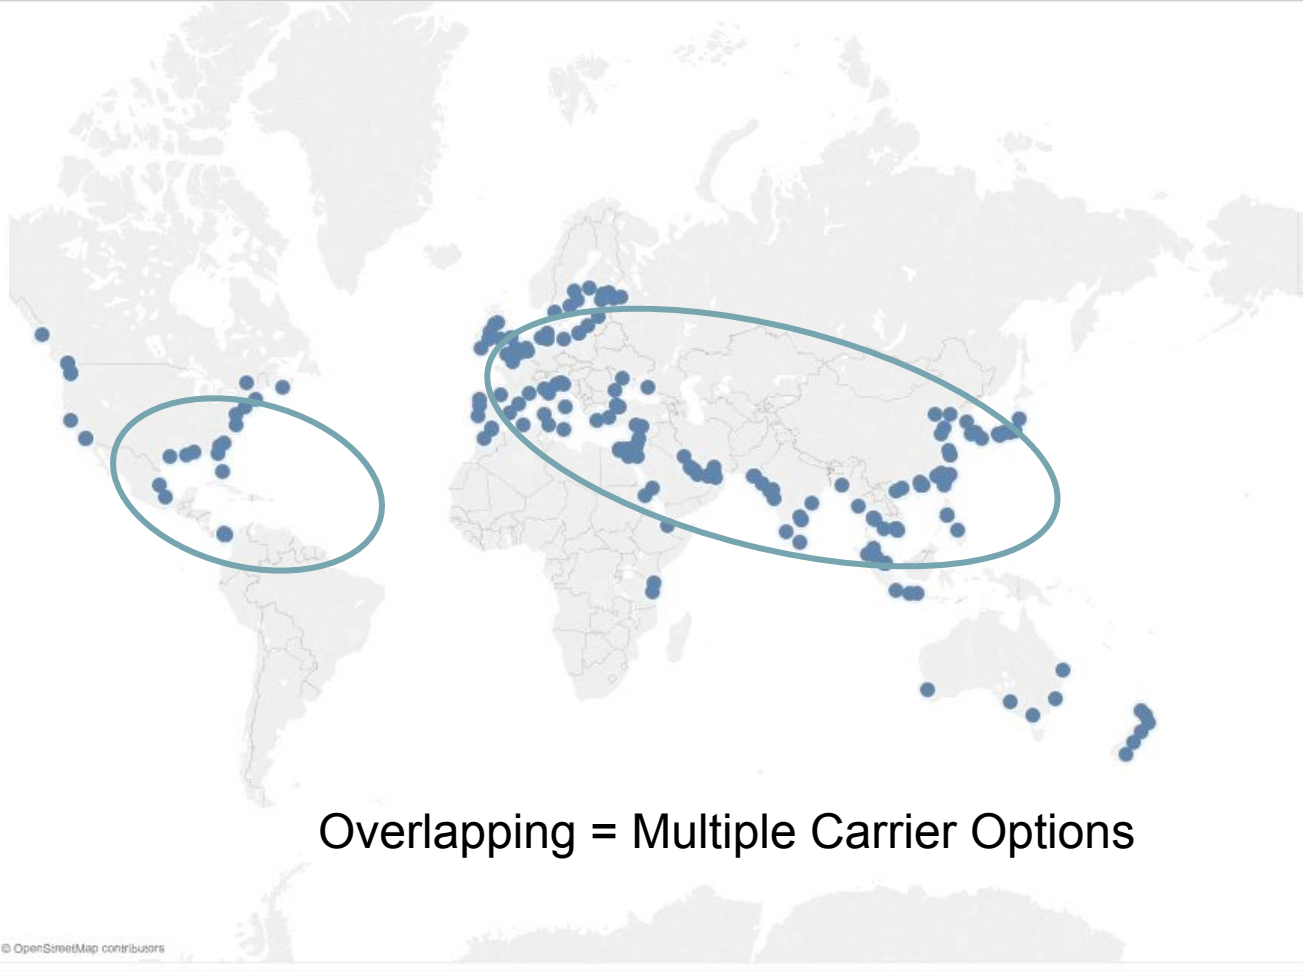

No tools for comparison

Information Gap

No	Port Name	Number of Carrier Passing
1	Bridgetown	2
2	Brisbane	15
3	Bristol	1
4	Buchanan	1
5	Ruenaventura	14
6	Buenos Aires	13
7	Burgas	2
8	Busan	17
9	Busan New Port	1
10	Bushehr	1
11	Cabinda	2
12	Cagayan De Oro	3
13	Cagliari	12
14	Cai Mep	14

Multiple Carrier Options

Port Location

CARRIER (Profor... 2

- Carrier A
- Carrier B
- Carrier C
- Carrier D
- Carrier E
- Carrier F
- Carrier G
- Carrier H
- Carrier I
- Carrier J
- Carrier K
- Carrier L
- Carrier M
- Carrier N
- Carrier O
- Carrier P
- Carrier Q

Overlapping = Multiple Carrier Options

# Solution: Marindex

- Marindex: An index (scoring) system to compare the carriers for a given route
- Purpose: Bridging the information gap between consignors and carriers
- Benefits:
  - Finding the **best carrier**
  - Connection with **end users** = easier to collect data
  - **Market Influence**

**Mx**

# Business Model

- Target: Small/Medium Size Businesses
- Product type: Website with search engine
- Revenue Source: Advertisement fees
  - Google-like-strategy: when a customer searches a route, show advertisement

# Key Performance Indicator

## Speed

Time taken between  
the origin port and  
the destination port

## Accuracy/Punctuality

Estimated time and  
CargoSmart's  
recorded time

## Reliability

Carrier's record and  
CargoSmart's record

# Index Calculation

$$I_{o,d,c} = 4.0 \times \frac{T_{max} - T_{o,d,c,r}}{T_{max} - T_{min}} + 4.0 \times \frac{AC_{max} - AC_{o,d,c,r}}{AC_{max} - AC_{min}} + 2.0 \times \frac{RL_{max} - RL_{o,d,c,r}}{RL_{max} - RL_{min}} \quad \forall c \in C$$

$$T_{o,d,c,r} = \frac{\sum_{v \in V} tmin_{o,d,c,r,t}}{n_v} \quad \forall v \in (R \cup V)$$

C = sets of carriers

R = sets of routes (service loop)

O = origin port

D = destination port

T = the time taken from the origin to destination

AC = the s.d. of the delay between actual and scheduled arrival/departure time

RL = the s.d. of the delay between actual arrival/departure time recorded manually or by CargoSmart

Marindex help you find the best suited carrier for your shipping needs.  
Just fill in the information and we'll do the searching for you!

Advertisement

Shipment: Hong Kong - Sydney (10/4/2017)

Rank	Carrier	Index	Sample Route	Estimated Time
1	Carrier B	8.9	Hong Kong-Singapore-Sydney	2 days 8 hours
2	Carrier C	7.2	Hong Kong-Singapore-Malaysia-Sydney	2 days 7 hours
3	Carrier O	7	Hong Kong-China-Sydney	2 days 5 hours
4	Carrier P	6.7	Hong Kong-China-Singapore-Sydney	2 days 15 hours
5	Carrier E	6.2	Hong Kong-Thailand-Malaysia-Sydney	2 days 10 hours

# Methodology & Demonstration

# Case Study: HK to Sydney

- $A = 9.2$
- $D = 2.2$
- $E = 4.0$

# Further Development

- Name of carrier → allow to fetch pricing information
- More criteria → more comprehensive understanding
- Mobile app

## Conclusion

*Every carrier performs differently in terms of their  
speed, accuracy, and reliability.*

*It is important to compare in order to make the best decision.*
